Single Display PID Temperature Controllers

TC4S

TC Series
PRODUCT MANUAL

For your safety, read and follow the considerations written in the instruction manual, other manuals and Autonics website.
The specifications, dimensions, etc are subject to change without notice for product improvement Some models may be discontinued without notice.

Features

- Single digital display (switch between PV and SV)
- 100ms high-speed sampling rate and ±0.5% display accuracy
- Switch between relay output and SSR drive output (patent) *
- SSR drive output (SSRP function) control options : ON/OFF control, cycle control, phase control
- Compact design with large display panels for easier reading
- Connector plug types offer easier wiring and maintenance (TCN4S- -P)

*Korea Patent Registration 10-1002582, U.S.A. Patent Registration 8645000, Japan Patent Registration 3184816, China Patent Registration ZL200980111733.X, Vietnam Patent Registration 1-0012131, India Patent Registration 291573, Indonesia Patent Registration IDP003216

Safety Considerations

- Observe all 'Safety Considerations' for safe and proper operation to avoid hazards.
- ⚠ symbol indicates caution due to special circumstances in which hazards may occur.

⚠ Warning   Failure to follow instructions may result in serious injury or death

01. **Fail-safe device must be installed when using the unit with machinery that may cause serious injury or substantial economic loss.(e.g. nuclear power control, medical equipment, ships, vehicles, railways, aircraft, combustion apparatus, safety equipment, crime/disaster prevention devices, etc.)**
    Failure to follow this instruction may result in personal injury, economic loss or fire.
02. **Do not use the unit in the place where flammable/explosive/corrosive gas, high humidity, direct sunlight, radiant heat, vibration, impact or salinity may be present.**
    Failure to follow this instruction may result in explosion or fire.
03. **Install on a device panel to use.**
    Failure to follow this instruction may result in fire or electric shock.
04. **Do not connect, repair, or inspect the unit while connected to a power source.**
    Failure to follow this instruction may result in fire or electric shock.
05. **Check 'Connections' before wiring.**
    Failure to follow this instruction may result in fire.
06. **Do not disassemble or modify the unit.**
    Failure to follow this instruction may result in fire or electric shock.

⚠ Caution   Failure to follow instructions may result in injury or product damage

01. **When connecting the power input and relay output, use AWG 20 (0.50 mm^2) cable or over and tighten the terminal screw with a tightening torque of 0.74 to 0.90 N m.**
    When connecting the sensor input and communication cable without dedicated cable, use AWG 28 to 16 cable and tighten the terminal screw with a tightening torque of 0.74 to 0.90 N m.
    Failure to follow this instruction may result in fire or malfunction due to contact failure.
02. **Use the unit within the rated specifications.**
    Failure to follow this instruction may result in fire or product damage
03. **Use a dry cloth to clean the unit, and do not use water or organic solvent.**
    Failure to follow this instruction may result in fire or electric shock.
04. **Keep the product away from metal chip, dust, and wire residue which flow into the unit.**
    Failure to follow this instruction may result in fire or product damage.

Cautions during Use

- Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents.
- Check the polarity of the terminals before wiring the temperature sensor. For RTD temperature sensor, wire it as 3-wire type, using cables in same thickness and length. For thermocouple (TC) temperature sensor, use the designated compensation wire for extending wire.
- Keep away from high voltage lines or power lines to prevent inductive noise. In case installing power line and input signal line closely, use line filter or varistor at power line and shielded wire at input signal line. Do not use near the equipment which generates strong magnetic force or high frequency noise.
- Install a power switch or circuit breaker in the easily accessible place for supplying or disconnecting the power.
- Do not use the unit for other purpose (e.g. voltmeter, ammeter), but temperature controller.
- When changing the input sensor, turn off the power first before changing. After changing the input sensor, modify the value of the corresponding parameter.
- 24 VAC～, 24-48 VDC⎓ power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.
- Make a required space around the unit for radiation of heat. For accurate temperature measurement, warm up the unit over 20 min after turning on the power.
- Make sure that power supply voltage reaches to the rated voltage within 2 sec after supplying power.
- Do not wire to terminals which are not used.
- This unit may be used in the following environments.
  - Indoors (in the environment condition rated in 'Specifications')
  - Altitude Max. 2,000 m
  - Pollution degree 2
  - Installation category II

■ Display accuracy

Input type	Using temperature	Display accuracy
Thermo-couple RTD	At room temperature (23℃ ±5 ℃)	(PV ±0.5% or ±1 ℃ higher one) ±1-digit • Thermocouple L, RTD Cu50 Ω: (PV ±0.5% or ±2 ℃ higher one) ±1-digit
	Out of room temperature range	(PV ±0.5% or ±2 ℃ higher one) ±1-digit • Thermocouple L, RTD Cu50 Ω: (PV ±0.5% or ±3 ℃ higher one) ±1digit

• In case of TC4SP Series, ±1℃ will be added.
• If the input specification is set to 'decimal point 0.1' display, add ±1℃ by accuracy standard.

Unit Descriptions
1. Temperature Display part (Red)
• Run mode: Displays PV (Present value).
• Setting mode: Displays parameter name, setting value.

2. Indicator

Display	Name	Description
▲ ■ ▼	Deviation	Displays PV deviation based on SV (Setting value) by LED. ▲: ON when deviation is over +2 ℃ ■: ON when deviation is within ±2 ℃ ▼: ON when deviation is under −2 ℃ Flashes during auto tuning every 1 sec
SV	Setting value	Turns ON when SV is displayed on temperature display part.
℃, ℉	Temperature unit	Displays selected unit (parameter).
AL1/2	Alarm output	Turns ON when each alarm output is ON.
OUT	Control output	Turns ON when control output is ON. • CYCLE/PHASE control of SSR drive output: Turns ON when MV is over 3.0%. (only for AC power model)

3. Input key

Display	Name
[MODE]	Mode key
[◀], [▼], [▲]	Setting value control key

Errors

Display	Description	Troubleshooting
oPEn	Flashes when input sensor is disconnected or sensor is not connected.	Check input sensor status.
HHHH	Flashes when PV is higher than input range.[01]	When input is within the rated input range, this display disappears.
LLLL	Flashes when PV is lower than input range.[01]	

01) Be careful that when HHHH / LLLL error occurs, the control output may occur by recognizing the maximum or minimum input depending on the control type.

Parameter Setting

- Some parameters are activated/deactivated depending on the model or setting of other parameters. Refer to the description of each item.
- The setting range in parentheses is for using the decimal point display in the input specification.
- If there is no key input for more than 30 seconds in each parameter, it returns to RUN mode.
- When pressing the [MODE] key within 1 second after returning to the operation mode from the parameter group, it will enter the parameter group before returning.
- [MODE] key: Saves the current parameter setting value and moves to the next parameter.
  [◀] key: Moves the column when changing the set value
  [▲], [▼] keys: Selects the parameter / Changes the set value
- Recommended parameter setting sequence: Parameter 2 group → Parameter 1 group → SV setting mode

■ Parameter 1 group
- Only appears at control output model.

01) Below parameters are initialized when the setting value is changed.
 - Parameter 1 group: AL1/2 alarm temperature
 - Parameter 2 group: Input correction, SV high/low limit, Alarm output hysteresis, LBA time, LBA band
 - SV setting mode: SV

02) If SV is lower/higher than low/high limit when the value is changed, SV is changed to the low/high limit value.
 If 2-1 Input specification is changed, the value is changed to Min./Max. value of Input specification.

03) When changing the value from PID to ONOF, each value of following parameter is changed.
 2-19 Digital input key: OFF, 2-20 Sensor error MV: 0.0 (When setting value is lower than 100.0)

04) 1-1/2 AL1, AL2 alarm temperature setting values are initialized when the setting value is changed.

Alarm operation **Alarm option**

Set both alarm operation and alarm option by combining. Each alarm operates individually in two alarm output models. When the current temperature is out of alarm range, alarm clears automatically.
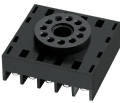

■ Operation

• **H**: Alarm output hysteresis

	Absolute value: Set as 90°C	Absolute value: Set as 110°C	
Sensor break	-		It will be ON when it detects sensor disconnection.
Loop break	-		It will be ON when it detects loop disconnection.

■ Option

| Name	Description	Condition of re-apply
Standard alarm	If it is an alarm condition, alarm output is ON. If it is a clear alarm condition, alarm output is OFF.	-
Alarm latch	If it is an alarm condition, alarm output is ON and maintains ON status.	-
Standby sequence 1	First alarm condition is ignored and from second alarm condition, standard alarm operates. When power is supplied and it is an alarm condition, this first alarm condition is ignored and from the second alarm condition, standard alarm operates.	Power ON
Alarm latch and standby sequence 1	If it is an alarm condition, it operates both alarm latch and standby sequence. When power is supplied and it is an alarm condition, this first alarm condition is ignored and from the second 1alarm condition, alarm latch operates.	
Standby sequence 2	First alarm condition is ignored and from second alarm condition, standard alarm operates. When re-applied standby sequence and if it is alarm condition, alarm output does not turn ON. After clearing alarm condition, standard alarm operates.	Power ON, change SV, change alarm temperature / operation or change STOP to RUN mode
Alarm latch and standby sequence 2	Basic operation is same as alarm latch and standby sequence1. It operates not only by power ON/OFF, but also alarm set value, or alarm option changing. When re-applied standby sequence and if it is alarm condition, alarm output does not turn ON. After clearing alarm condition, alarm latch operates.
